

Team Racing Endurance Challenge (TREC)

Official 2020 National Rules

(Rules subject to change)

Jan. 3, 2020, Version 3.0

Copyright 2019

1. Introduction

Tired of red tape and hassle just to go racing on a real track? This is a cool series where you don't need anything other than a car that meets safety specs and a great attitude to make racing fun. NO PREVIOUS RACING EXPERIENCE, NO LICENSE, NO MEDICAL, NO HISTORY TESTS!

Worried about stupid drivers banging into you? We have a program where we treat everyone like an adult and come down hard on those that act like children. We expect everyone to be mature enough to make good decisions so contact is not something that will be tolerated! If your only desire is to finish first, this is not the place for you to race.

2. Intent

The intent of the TREC series is to host a fun, safe endurance racing competition. If you're not having fun, you're doing it wrong in this series.

3. Sanctioning Body

The NASA TREC series is supported and sanctioned by the National Auto Sport Association (NASA). All competitors must read and abide by the rules **set forth in the current Club Codes and Regulations (CCR)** and any supplementary rules issued by the Race Directors, Regional Directors, or National Series Directors.

4. **Eligible Vehicles Manufacturers/Models/Configurations**

- 4.1. Anything and everything! Run what you bring! Obviously there has to be some safety stuff, so make sure the vehicle complies with the CCR. We don't want Mr. Pro Racer and/or superfast cars. If your car is too fast, we'll just move you to the highest class and subtract 100 laps (or something worse)!
- 4.2. If you bring a tube frame and/or factory built race car, it better fit within the spirit of our series or you can take it home. Cutting Edge, high tech is not welcome... get it?
- 4.3. There should be a session for us to determine your lap times. Call it warm up, qualifying, practice, or your own pity party. Classes will be made by grouping cars; with spankings for those that sandbag. So, you should absolutely put your fastest driver in for this session.
- 4.4. Tires- You can use any street tire (DOT) that says treadwear 180 (or greater) on the sidewall.

As a guide on what you can expect to race against, refer to Appendix B to learn where we expect to class vehicles during our events.

5. **Safety**

- 5.1. NASA, FIA, INEX, SCCA cage / safety rules apply.
- 5.2. If you have a race chassis or tube frame that isn't a NASA Prototype, you're probably going to be deemed "FU." (see later) Legends and Thunder Roadsters are invited in their original trim or with some light mods (e.g. GTR, GTX).

6. **On-Course Conduct**

- 6.1. Any driver screwing around, driving dangerously, causing body contact, or generally being a problem will be immediately introduced to a classroom to learn about the penalty section! (This could include driving too slowly, which is why we recommend everyone attend NASA HPDE training if they believe they may not be up to speed).
- 6.2. **No blocking!** You get ZERO MOVES. That means no defending your line either. If someone is on the inside of the corner, MAKE ROOM! Because of this rule, you'll get them back on the next corner! Think of this as fun and courteous racing. (Note- This is different than the CCR)
- 6.3. If your friends or crew do something stupid you will pay the price. Driver is responsible for all members of the team.
- 6.4. If a race runs past dusk, brake lights, headlights, and taillights are not just a good idea, it's the law! Don't ask when dusk is, we don't know exactly, but the driver will!
- 6.5. Roof-mounted lights, and obnoxious or blinding lights, are not courteous and will be rendered inoperable by one of the cruel dudes known as pit marshals.

7. **Administration**

- 7.1. As per the NASA CCR, all vehicles must display at least one NASA decal on each side and one on the front and one on the rear. No other current sanctioning body decals are permitted.
- 7.2. Lighted or light-reflective numbers are encouraged.
- 7.3. Each team that wants to be scored must have a working AMB/My Laps transponder.
- 7.4. If you mess up your car and want to use another, check with the Race Director.

8. **Licensing Qualification**

- 8.1. No racing license is needed, except for TREC FU.
- 8.2. TREC 1, 2, 3, and 4 only require a valid state driver's license (or, of course, an accepted racing license as outlined below).
Participation in the shameful TREC FU, class requires drivers to hold one of the following NASA Licenses: TREC, Time Trial, Instructor, or Competition. Additionally, SCCA, FIA, JAF, BMWCCA, et al. licenses are cool too. Any team that enters a vehicle classifies in TREC 1-4 but gets moved to TREC-FU will be held to this standard. In other words.....if you plan to screw up and bring a fast Sprint/WERC car, all drivers must be properly licensed.
- 8.3. Once you complete four (4) TREC events (without pulling off some idiotic moves that landed you in trouble) you may apply for a TREC competition license.
- 8.4. Anyone that has driven in five (5) or more endurance races (within the past three years) outside NASA, may apply for a TREC competition license through their local regional office or through NASA National.
- 8.5. Anyone that completes six (6) NASA TREC events while possessing a TREC license, may apply for a NASA provisional competition license (good for NASA sprint racing, Championships, WERC, etc). However, you must be able to pass the HPDE 4 level checkout ride and pass the CCR test as the minimum prerequisite.

9. **Vehicle Modifications**

- 9.1. Do whatever you want. Just remember the 180 treadwear tire rule. And oh yeah, it's not going to be cool if you run NO2 or methanol. So if your ride is hooked on this stuff get your car through twelve-steps before you show up!
- 9.2. Remember, the faster you go, the higher the class, so keep mods cheap, and keep it fun to maximize your racing per dollar.

10. Classes

- 10.1. The official classes are TREC 1, 2, 3, 4. TREC 1 is the fastest scored class. Teams will be classed based on a qualification session to determine which class you will be assigned. (Although, the Race Director can use any system they like in the interest of fun!)

Appendix B gives you a general guideline where your team could compete. This is the class you will register for the event. If all drivers had the same level of skill, cars would be classed as such. However, because this format is to ensure fun, your final race classification will be based on your fastest drivers qualification time. For example, If there is an inexperienced team with a fast car, it might register as TREC 1 but get classed for competition in TREC 4 based on lap times.

For example, classes could be broken up like this:

20 cars or less = 2 classes. Top 10 fastest in TREC 1, slowest 10 in TREC 2.

21 - 30 cars = 3 classes. Cars will be divided among TREC 1, TREC 2, TREC 3.

31+ cars = 4 classes. Cars will be divided among TREC 1, TREC 2, TREC 3, TREC 4.

Alternatively, the Race Director could manually break up all vehicles by time into the classes he/she feels will provide the best racing following your timed session.

It is ultimately up to the Race Director.

- 10.2. Teams that are too fast – YOU KNOW WHO YOU ARE – will be deemed a gamer and put into the “we don’t care class” unofficially called “TREC FU.” The “FU” stands for “*Forgotten & Unscored*.” In fact, any contact while passing will be YOUR fault. FU classed drivers **must** be extra careful picking their passing places carefully. Additionally, you might win the race but you won’t get points or a trophy! Congrats, you now get the street rep of “*Forgotten & Unscored*” because you are so darn fast.
- 10.3. To give you “completive folks” an idea, if you’re turning lap times like a car with more than 10:1 (ST 3 type car) WT/HP, you’re probably going to be put in the FU class. You are welcome to detune before the event.
- 10.4. Sandbagger rule- If your race lap times become faster than your qualification time, the Race Director will likely move you to the next faster class. Or you might be penalized so much that you have no chance to podium. This means you will have to pit for five minutes (or try something in our penalty section) for trying to put one over on us.
- 10.5. The Race Director may consider group/class size, weather during “qualifying,” and any other factors. Any method chosen by the Race Director cannot be questioned, unless there was a mistake in calculations based on stated classing method.

11. Pits and Flags

- 11.1. In case of something especially bad, we may use a red flag to stop the race on track. If your vehicle is already in the pitlane or paddock you can continue to wrench, fuel, etc. But you will not be allowed back on track until after the green flag is displayed.
- 11.2. The pits are “closed” during full-course yellows. If a vehicle enters the pit lane during a full course yellow situation, the driver has two options:

- A) Park in the team's pit space and do nothing until the green flag is displayed at the starters' stand. The driver may not exit the vehicle (unless there is an emergency or is instructed to do so by an official). Work of any kind on the vehicle is prohibited.
- B) Continue through the pit lane and rejoin the field at the discretion of the re-entry marshal based on safe-release conditions.

12. **Fueling, Pitstops, and more serious safety stuff**

Look folks, we can write up a whole bunch of rules, 99% of which is made to limit the “gamers,” and the “pros,” etc. Handling fuel, fueling, and doing pitstops can have elements of danger. So, to keep it simple, **DO NOT BE THAT GUY!** Work slowly and safely. These are long races and if you want to be careless, we're just going to drop the hammer on you. This means if you do some stupid stuff, you're going to get put on the rack...and we don't mean the kind that holds your car in the air!

- 12.1. Any team that enters the pit lane and stops for fuel will need to remain stationary for a period no less than 5 minutes.
- 12.2. Vehicles with 18 gallons or more of fuel capacity must report to tech before the race begins to verify the fuel tank(s) is/are empty. Once verified empty, 18 gallons can be filled and the fill spout will be sealed for the start of the race.
- 12.3. Fueling has to be performed first before anything else during that stop. **No work** may be done on the car before all the fueling equipment is over the wall and the car's gas cap is securely replaced.
- 12.4. All equipment and crew must be behind the wall (not on top of the wall) until your car comes to a stop in your pitbox.
- 12.5. All fuel must come from a standard 5-gallon can. Do not screw around with this term. If you need help understanding that, refer to Appendix A. However, you can add hoses and funnels; typical stuff you find at the home improvement center.
- 12.6. A catch pan must be used during refuelling to catch any excess fuel that may disperse from the overflow. Catch pans **MUST** be manufactured of metal or sturdy, gas-resistant plastic, minimum of 3" deep. Catch pans should be between 12"- 24" square or diameter.
- 12.7. Anyone touching fuel equipment in the hot pit must be wearing the same personal safety gear as the driver, except the HANS. Nomex lined, outdated helmets are allowed.
- 12.8. During refueling two, properly dressed, fuelers are allowed over the wall while refueling, as well as one fireman holding a fire extinguisher 7' – 10' away. The fireman is not required to wear driver-safety gear. No other personnel over the wall except as listed in the next section.

- 12.9. All competitors are required to keep two gallons of water, at least one 5 lb. or larger BC or ABC rated fire extinguisher (with a gauge indicating fully charged), and at least 5 pounds of oil absorbent in their pit space. CO2 and Halon / Halatron are highly recommended as they do not leave a mess to clean up. Additionally, if Dry Chem or Sodium Bicarbonate is used, there are chemicals such as vinegar that can be kept on hand to remove such chemicals. Sharing of required equipment, such as fire extinguishers, is not permitted between pit spaces, even for the same team.
- 12.10. Driver changes during refueling are permitted. The driver may remain in the car or may exit to change driver. Alternatively, the driver may assist with refueling, but will be counted as one of the two permitted refuelers.
- 12.11. After all of the fueling equipment is back over the cold wall, any number of drivers and crew with a specific duty related to the pitstop may be over the wall in hotpits.
- 12.12. Each team must stop for at least five gallons of fuel within the first hour. However, no team may stop for fuel on the warm up lap or first lap of the race.
- 12.13. Carrying more than thirty-four (34) gallons of fuel at any given time is prohibited.
- 12.14. No team will dump the contents of more than two 5-gallon containers into a single permitted fill point on the car during any stop.
- 12.15. Careless handling of fuel (not just spilling) may bring the “perp walk,” or other penalties including “the sandbox,” and “proficiency challenge.”
- 12.16. Funky, weirdo, crazy, stupid, and/or bizzare fuel equipment, whether inside the car or part of your fuel jugs, storage / handling, will be met with zero tolerance. This event is strictly made for fun. What’s not fun? Getting kicked out for clever attempts to skirt safety rules!
- 12.17. **Tire changes**
- 12.17.1. Only one tire-changing tool may be used at a time. (impact gun, lug star, etc).
- 12.17.2. Two tires must be in contact with the ground for the purpose of tire changes. (This means you can jack up either side, the front or the rear at a time.)
- 12.17.3. Rotating tires is permitted.
- 12.17.4. Use of air jacks / jacking systems is prohibited.
- 12.17.5. The use of any device during competition other than a manual jack(s) or a manually operated hydraulic jack to raise the vehicle is prohibited.
- 12.18. **Pitlane safety**
- 12.18.1. Pitlane speed limit is 25 mph.

- 12.18.2. Unless otherwise indicated, the speed limit is in force from the first occupied pit box to the last occupied pit box, unless otherwise marked and specified.
- 12.18.3. Only Officials and authorized media are permitted to stand in the pitlane.
- 12.18.4. Two crewmembers are permitted to remain at the trackside wall for the purpose of signaling their driver. Spectating from the trackside pit wall is prohibited.
- 12.18.5. No one is permitted to be in the hot pit lane or near the trackside wall until after the initial green flag has been displayed and all of the vehicles have passed the first corner.
- 12.18.6. There shall be at least one jack stand under a vehicle if a crewmember(s) is working under the vehicle. The weight of the vehicle need not be on the jack stand.
- 12.18.7. No car is permitted to use reverse gear in the pit lane. However, crew members may push the car backwards.

13. **Penalties**

- 13.1. Penalties are not fun and require event officials to go against the spirit of the event, therefore if a penalty is necessary, you're probably going to get to enjoy one of the several unpleasant experiences below– seriously. We generally educate the offender (perp) and give a warning for first offences. However, if necessary for your safety and others, a penalty could result in you going to “the land of the banned” for many years! No definition needed.
- 13.2. Perp walk– while this can vary per local supps, it's basically a walk of shame whereas the dipstick that screwed up must walk the length of the pitlane and apologize to each team for their transgression, meanwhile their team gets to look at their vehicle sitting with the engine off in their space until the perp returns.
- 13.3. Sent to Your Room– This is a “time out” for a particular driver, whereas he/she/ are barred from getting back in the vehicle for a certain length of time.
- 13.4. Sandbox– When your team has been ordered to park their car for a certain amount of time, they will put it in the sandbox. The sandbox default is middle of hot pit lane, but could be any other designated place.
- 13.5. Proficiency Challenge– A team has been ordered to perform a task(s) such as remove and reinstall all four wheels using a manual lug wrench because they showed lack of sportsmanship, dumb, dangerous, and/or incompetent behavior during a pitstop.
- 13.6. Undergarment Check– public confirmation that the driver is wearing appropriate fire rated undergarment(s) Shirts, socks, etc.
- 13.7. Cavity Search– your vehicle goes to impound for an annual re-inspection during the race. Tech might think it's a good time to re-measure your cage!

Appendix A - Fuel Containers

Approved Containers

NASA approved containers are limited to “5-gallon containers” shown below. These containers might hold slightly more than 5 gallons, as they come from the factory. Note: Modifications to increase the capacity of these cans are prohibited.

LEGAL CONTAINER REGARDLESS OF BRAND

LEGAL CONTAINER REGARDLESS OF BRAND

LEGAL HUNSAKER BRAND ONLY

Note: Any hoses or fittings may be used, but the only modification to the jug permitted is the removal of the top of the outlet to install a hose on the jug outlet.

3. Examples of Illegal Containers

NOT LEGAL CONTAINER REGARDLESS OF BRAND

NOT LEGAL CONTAINER REGARDLESS OF BRAND

Appendix B - TREC Base Classing

NA = Not Allowed
