*This four page form is to be completed by the applicant and examiner (MD or DO--all PA or NP examiners must have an MD/DO co-signature), and all pages must be signed and dated by both. It is the applicant's responsibility to upload this document to the NASA website or to forward it to NASA National.*

*Any blank spaces will delay license processing!*

### Memorandum to Examining Physician:

The four pages of this form are collectively referred to as the "Medical Evaluation." You are being asked to examine this applicant for the purpose of obtaining an automobile racing license. This form concentrates on the organ system and disease processes that may jeopardize the applicant or others while attending a competitive racing event. If you deem that the applicant may be in questionable condition, the matter may be turned over to the NASA Medical Director for review. **Your recommendation for approval will be reviewed, but it is the final decision of the NASA Medical Director** whether or not an applicant is medically cleared for racing. At a minimum, the conditions listed on page three will require review by the Medical Director.

**Page One—Background Information** for the Medical Evaluation form.

**Page Two—Medical History** is to be completed by the applicant, and reviewed and initialed by the examiner.

**Page Three—Examination** is to be completed by a MD/DO or an NP/PA with an MD/DO co-signature.

**Page Four—Comments and Recommendations** Any requested or necessary additional information and final recommendation—signed by the examiner and supervising physician if NP/PA examiner.

### A. The functional requirements of a driver in a competition automobile are:

1. Ability to rapidly operate acceleration, braking, and steering mechanisms/systems.
2. Vision: distant vision correctable to 20/40 each eye, ability to distinguish basic colors, and peripheral vision to 45 degrees in the horizontal median for each eye.
3. Should have minimal chance of sudden incapacitation from any disease process.
4. Ability for rapid mental activity, problem solving, and decision-making.

### B. The environment this applicant may operate in is:

1. Temperature extremes from 0 degrees (F) to 130 degrees (F) for long periods of time.
2. Smoke, fumes, vapor, caustic chemicals, and dust.
3. Loud noise and vibration.
4. Increased potential for exposure to fire.

**Special Cases:** All consultants must be made aware of the information in **Section A & B** of this memorandum.

**Requirement of All Applicants\*:** All applicants must submit the completed form. Similar forms from other recognized organizations and agencies may be acceptable, however the applicant will be held accountable to the rules and other parameters as set forth by NASA. **A baseline (one-time) 12-lead EKG tracing must be submitted for all drivers age 45 or greater. Additional EKG tracings shall be at the discretion of NASA by individual request.**

### Renewal Intervals (minimum intervals without abnormalities):

**\*Exceptions:** Medical clearance may be granted in certain circumstances with the approval of the NASA Medical Director. NASA will stipulate any additional requirements or modified/shortened renewal intervals.

Applicants that are less than 40 years old must renew their Medical Evaluation every five years.

Applicants that are at least 40 years old must renew their Medical Evaluation every three years.

Applicants that are at least 50 years old must renew their Medical Evaluation every two years.

Applicants that are at least 70 years old must renew their Medical Evaluation every 12 months.

**Tips On Peripheral Vision Exam**

Peripheral vision exam by confrontation is a simple procedure. Position yourself so that your face is directly in front and on the same level with the patient, about 2 feet away. Ask the patient to cover one eye and to look at your eye directly opposite. Close your other eye so that your own visual field is roughly superimposed on that of the patient. Bring a pencil or other small object (light) from behind and from the periphery slowly into the patient's field of vision. Ask the patient to indicate when the object appears. Estimate in degrees the point where the patient sees the object to the point where the patient is looking directly ahead. Test the other eye in the same manner. Lack of adequate or impaired peripheral vision should be given special consideration.
